

ABSTRACT OF THE DISCLOSURE

A container assembly for three dimensional premium item mounted removably to a beverage cup for handling as a single unit has a clear, plastic cover member, and first and second base members. The first base member is formed with a gift containing well which is closed by a clear flat top panel of the cover member by assembly of the first base member therein. The second base member releasably attaches to the bottom of the first base member to define a collectible card receiving compartment and has a flat topped bottom recess which can receive the top panel of another assembly to enable the container assemblies to be stably stacked on top of each other. The second base member is a press fit on the lid of a standard large beverage cup to releasably mount the container assembly thereon.
